- TCP/IP implementation in C.
- Register   here.

- TCP iterative server, accompanied by a client. The server receives a *name* from the client and turn back *Hello name*. The client takes the name from the standard input, sends the server, then expects the server's response:
    - servTcpIt.c;
    - cliTcpIt.c;
    - Makefile;
- UDP server accompanied by a client. The server receives a *name* from the client and turn back *Hello name*. The client takes the name from the standard input, sends the server, then expects the server's response:
    - servUdp.c;
    - cliUdp.c;
    - Makefile;
